ONE-PAGER · FOR FOUNDERS & STARTUPS

Run your company's security and corporate housekeeping in one place.

"The filings, the insurance renewals and the first security questionnaire all live in my head."

Tuesday morning

A state filing due this month, an insurance certificate a customer asked for yesterday, and a security questionnaire nobody at the company knows how to answer.

They search for: startup compliance checklist · startup corporate governance checklist · startup insurance requirements · SOC 2 for startups

How CMDash answers it

1. Your company's housekeeping, on its own page

From Starter, a Business governance page tracks company formation, state filings, taxes, insurance, advisers and board minutes, each with a plain explanation, an owner and a due date, and sends a reminder ahead of each date. It is a tracker, not legal, tax or insurance advice.

2. A security program from the first day

Every plan, Free included, opens with a guided program builder that drafts your starter policies for you to review and shows one recommended next step, so the first customer questionnaire has something behind it.

3. A security grade from the tools you already use

From Starter, a posture grade is computed from the tools you connect, such as AWS, GitHub and Okta, and recomputed as they change, not typed into a form.

Frameworks customers ask a young company for

- **SOC 2 Type II**
- **NIST Cybersecurity Framework 2.0**
- **ISO/IEC 27001:2022**
- **HIPAA Security Rule**

Where the evidence comes from

- **Amazon Web Services**
- **GitHub**

Okta
