

Everything a CISO checks daily — in one place.

"I have to explain this to the board on Thursday."

Tuesday morning

Six consoles, a spreadsheet, and a slide deck that is out of date before it is presented.

They search for: security posture dashboard · board reporting security metrics · CISO dashboard

How CMDash answers it

1. One screen instead of six tabs

The posture grade, integration health and compliance progress, together — the thing you actually open first Tuesday morning.

2. The trajectory, not a snapshot

The board's real question is whether the programme is improving. The maturity score is computed from live control state, so the trend line answers it without a narrative built the night before.

3. The board pack, assembled from what is already true

A board-ready export built from the same live data as the dashboard — not a slide deck someone rebuilds by hand the morning of the meeting.

Frameworks a security leader reports on

NIST Cybersecurity Framework 2.0

ISO/IEC 27001:2022

SOC 2 Type II

CIS Controls v8.1

Where the evidence comes from

CrowdStrike Falcon

Splunk Enterprise Security

Okta

AWS Security Hub

Backed by the catalog, not a slide

19

frameworks supported

1,715

seeded controls

47

integrations

797

crosswalk mappings

See it against your own controls
