

One view across every client, not twelve.

"I run twelve clients and I bill for the report."

Tuesday morning

Twelve tenants, twelve spreadsheets, and no way to compare them.

They search for: multi-tenant GRC platform · VCISO platform · MSP compliance tooling

How CMDash answers it

1. Every client on one screen

Average posture across the portfolio, and the one client that slipped this week — without opening eight tabs to find it. Open any client from the same row.

2. Every client, the same daily view

One login, one dashboard shape per client workspace — so moving from client 3 to client 9 does not mean relearning where anything lives.

3. Run the programme the same way for every client

Charter, objectives, committees and management reviews, per client, on the same module — not a bespoke process you rebuild for each engagement.

4. The report you bill for, white-labelled

A board pack built from live data, exported under the client's own branding — the deliverable, not the busywork before it.

Frameworks your clients ask for

**NIST Cybersecurity
Framework 2.0**

SOC 2 Type II

CMMC Level 2

ISO/IEC 27001:2022

Where the evidence comes from

CrowdStrike Falcon

Okta

Amazon Web Services

Microsoft Sentinel

Backed by the catalog, not a slide
